

Flavors and fragrances are protected with **far infrared ray!**

Rangemate prevents electromagnetic waves from contacting food. It cooks with far infrared ray.

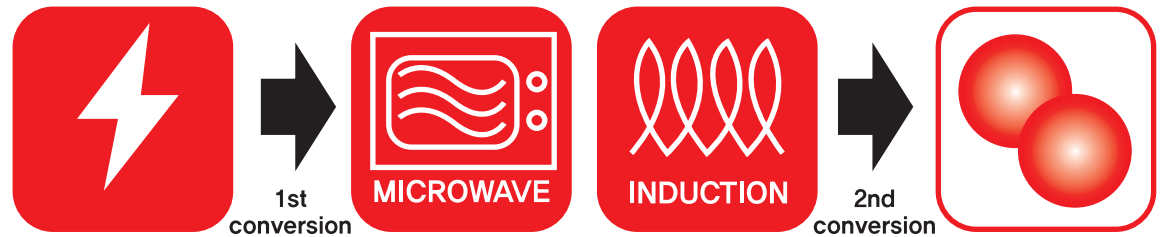

for Microwave & Induction use

RANGE MATE

Secondary energy conversion technique

Electric Energy

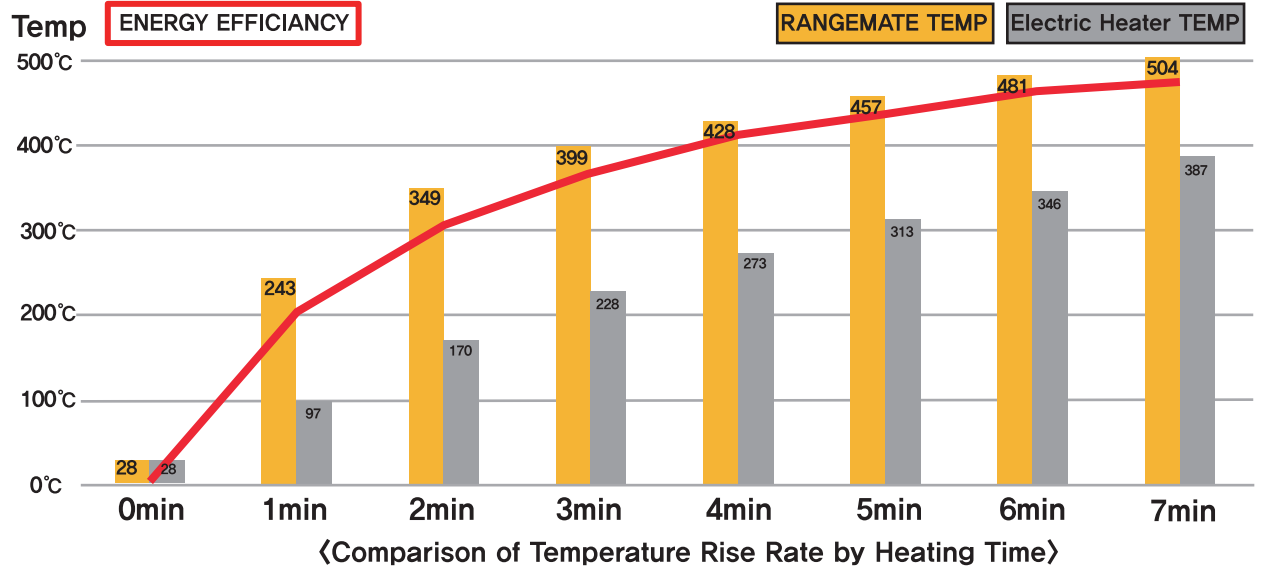

Microwave
(Electromagnetic wave)

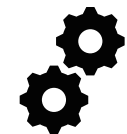

Thermal Energy
(Far infrared ray)

243°C in just 1 minute

500°C max heating temp

The core technology of Rangemate works by converting microwave & electromagnetic waves into heat energy through electromagnetic waves absorbing 'heating plate' in the bottom of the pan. Rangemate with this technology shows up to 21~291% energy efficiency compared to an electric heater. Unlike an electric heater, Rangemate using energy conversion technology great energy saving. Compared to fossil fuel (gas stoves), it is an eco-friendly product that does not generate smoke and odors. Therefore, Rangemate is an energy-saving and eco-friendly cooker.
